

Foaming Uterine Bolus

VetOne's Foaming Uterine Bolus sets a new standard for reducing the effects of metritis and other post-partum uterine conditions.

This patent-pending, non-medicated, foaming intrauterine bolus contains carbamide peroxide and is indicated for use as an antiseptic and proteolytic aid in dairy and beef cattle, sheep, and goats. The bolus dissolves and foams up when it comes in contact with the uterine lining. This foaming action helps release retained placenta debris for efficient removal. Carbamide peroxide also reduces bacteria to minimize post-partum risk of metritis and accelerate recovery from intrauterine infection.

With Foaming Uterine Bolus, there is no need for numerous insertions that could expose the animal to contamination. A single bolus application is generally more effective than standard urea boluses. This product requires no milk discard or meat withdrawal.

ITEM #	DESCRIPTION	UNIT
510092	Foaming Uterine Bolus	Jar of 20
510093	Foaming Uterine Bolus	Jar of 50
