

X-Ray Film

Green

Super HR-T is a high-contrast, orthochromatic film that provides high image quality in even the most demanding diagnostic conditions. It delivers ultra-high-resolution, fine-grain images under super-rapid (45-second), rapid (90-second), and longer processing cycles.

Blue Full Speed

Super RX is a high-contrast, blue-sensitive medical X-ray film for use with blue-emitting intensifying screens. It is ideally suited for use in general radiographic procedures with either calcium tungstate or blue rare earth intensifying screens. Excellent visualization of clinically significant information can be obtained within a wide range of system speeds.

Blue Half Speed

The unique design of RX-U allows it to be utilized as a half-speed blue film with blue-emitting rare earth intensifying screens or as a high-speed orthochromatic film with green-emitting rare intensifying screens. Sigma-LIC grain and crossover technology deliver sharp detail and consistent performance in all applications.

| ITEM# | DESCRIPTION | SIZE | UNIT | TYPE |
|--------|-----------------------------|-----------|------------|----------|
| 610116 | X Ray Film Green Full Speed | 14" x 17" | 100 sheets | HR-T |
| 610118 | X Ray Film Green Full Speed | 10" x 12" | 100 sheets | HR-T |
| 610120 | X Ray Film Green Full Speed | 8" x 10" | 100 sheets | HR-T |
| 610117 | X Ray Film Blue Full Speed | 14" x 17" | 100 sheets | Super RX |
| 610121 | X Ray Film Blue Full Speed | 10" x 12" | 100 sheets | Super RX |
| 610119 | X Ray Film Blue Half Speed | 14" x 17" | 100 sheets | RX-U |
